

Quick Start Guide

This guide is a condensed version of the installation process. Detailed instructions are available for each step of the installation process and can be found within this guide or on the navigation menu.

Please follow the steps below in the same order of operations as described:

graph LR A(Prerequisites) --> B(Gateway Setup) B-->C(Agent Setup) C-->D(Dashboard Setup);
linkStyle default stroke-width:2px,fill:none,stroke:black;

1. Confirm Prerequisites
2. Configure Gateway
3. Configure Agent(s)
4. Configure Dashboard

Prerequisites

Confirm the following before continuing your xConnect installation and configuration:

- Network Access has been configured or confirmed:

Source	Destination	Port	Protocol
Agent System(s)	Gateway	1883	MQTT (TCP)
Agent System(s)	Gateway	8080	HTTP (TCP)
Gateway	Internet	443	SSL (TCP)
Gateway	Internet	8883	RabbitMQ (TCP)

- You've received credentials for the xConnect Web Dashboard (senecaxconnect.com)

- Have a PC that can be used to complete IP address changes to gateway (if desired)

Gateway Setup

If you purchased a turnkey gateway appliance from Seneca, complete the setup steps here:

[Turnkey Gateway Setup](#)

If you are setting up a virtual machine gateway, complete the setup steps here:

[Docker Gateway Setup](#)

Agent Setup

It is recommended to always download the latest version of the Agent. This is available from our download repository here:

[Download repository](#)

Dashboard Setup

Once the gateway and agent(s) are installed and configured, you can login to your xConnect Dashboard instance here:
