Release 2021.04.0: April 26th, 2021

Enhancements

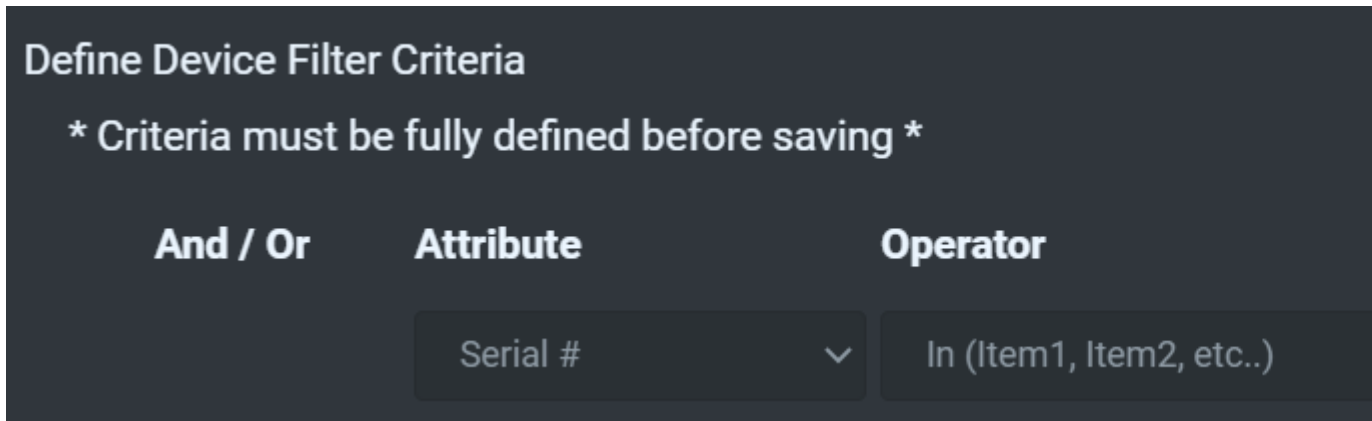

- Manual remote command executions are now tracked by the user who initiated the command:

REMOTE COMMAND HISTORY			
Show 10 ▼ items per page			
Device	Date	Status	Executed By
BLT-DESKTOP	04/26/2021 04:42:48 PM	Succeeded	mike @arrow

- Remote commands now supports up to 25,000 characters
- Support for Azure-based Active Directory authentication method. For more information, please see [Azure Authentication](#)

Bug Fixes

- Ability to search the "Serial" field using the "IN" operator within the remote commands page:

Define Device Filter Criteria

*** Criteria must be fully defined before saving ***

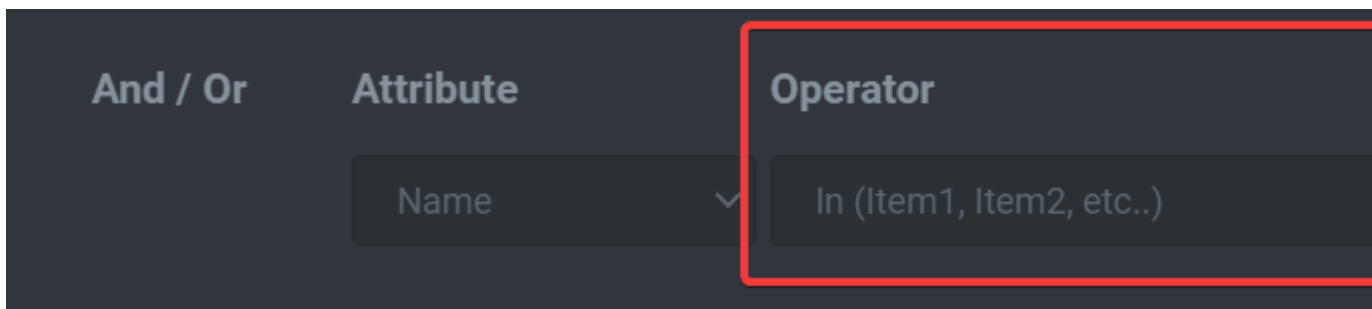

And / Or	Attribute	Operator
	Serial #	In (Item1, Item2, etc..)

Minor Release 2021.02.5: March 25th, 2021

Enhancements

- Added query operator to Remote Commands and Custom Event Configurations

There is a new operator that will allow you to pull devices based on a comma-separated list of values. The functionality

And / Or	Attribute	Operator
	Name	In (Item1, Item2, etc..)

By choosing the "IN" operator, you can specify one or more values to search. In the example above, I am searching for

Minor Release 2021.02.4: March 10th, 2021

Enhancements

- Enable or disable the ability to batch execute a remote command

There is a new control on the remote command edit form that will allow you to enable or disable the ability to execute

Enable Batch Execution

If the command execution is disabled, you will not be able to hit the "play" icon on the remote command grid:

Show 10 items per page

<input type="checkbox"/>	Command Name	# Devices	Command
<input type="checkbox"/>	Bug Test	5265	PowerShell
<input type="checkbox"/>	Install Zabbix	0	Batch

Checking the checkbox control will allow you (or any other power user) to perform a batch execution on the command.

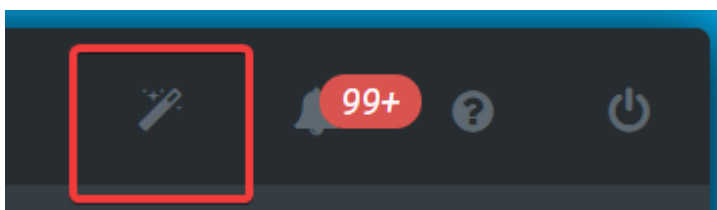

Release 2021.02.0: February 6th, 2021

Enhancements

- Virtual Gateway Onboarding Wizard

We have added the ability to create virtual gateways within your xConnect instance! Customers with the cloud gateway license will be able to create virtual gateways.

- Upon logging in to a **new** account with no gateways or devices, the onboarding wizard will automatically appear.
- At any time, you can open the onboarding wizard by clicking the icon in the header:

- The initial step of the onboarding wizard will enable you to begin onboarding a new Virtual Gateway or will take you to the device onboarding screen.

Onboarding

What type of asset wo

Virtual Gateway (6 remaining)

BLT-DESKTOP	12/17/2020 03:44:55 PM	Succeeded

- Reporting is now available for all power users and can be accessed by the settings menu:

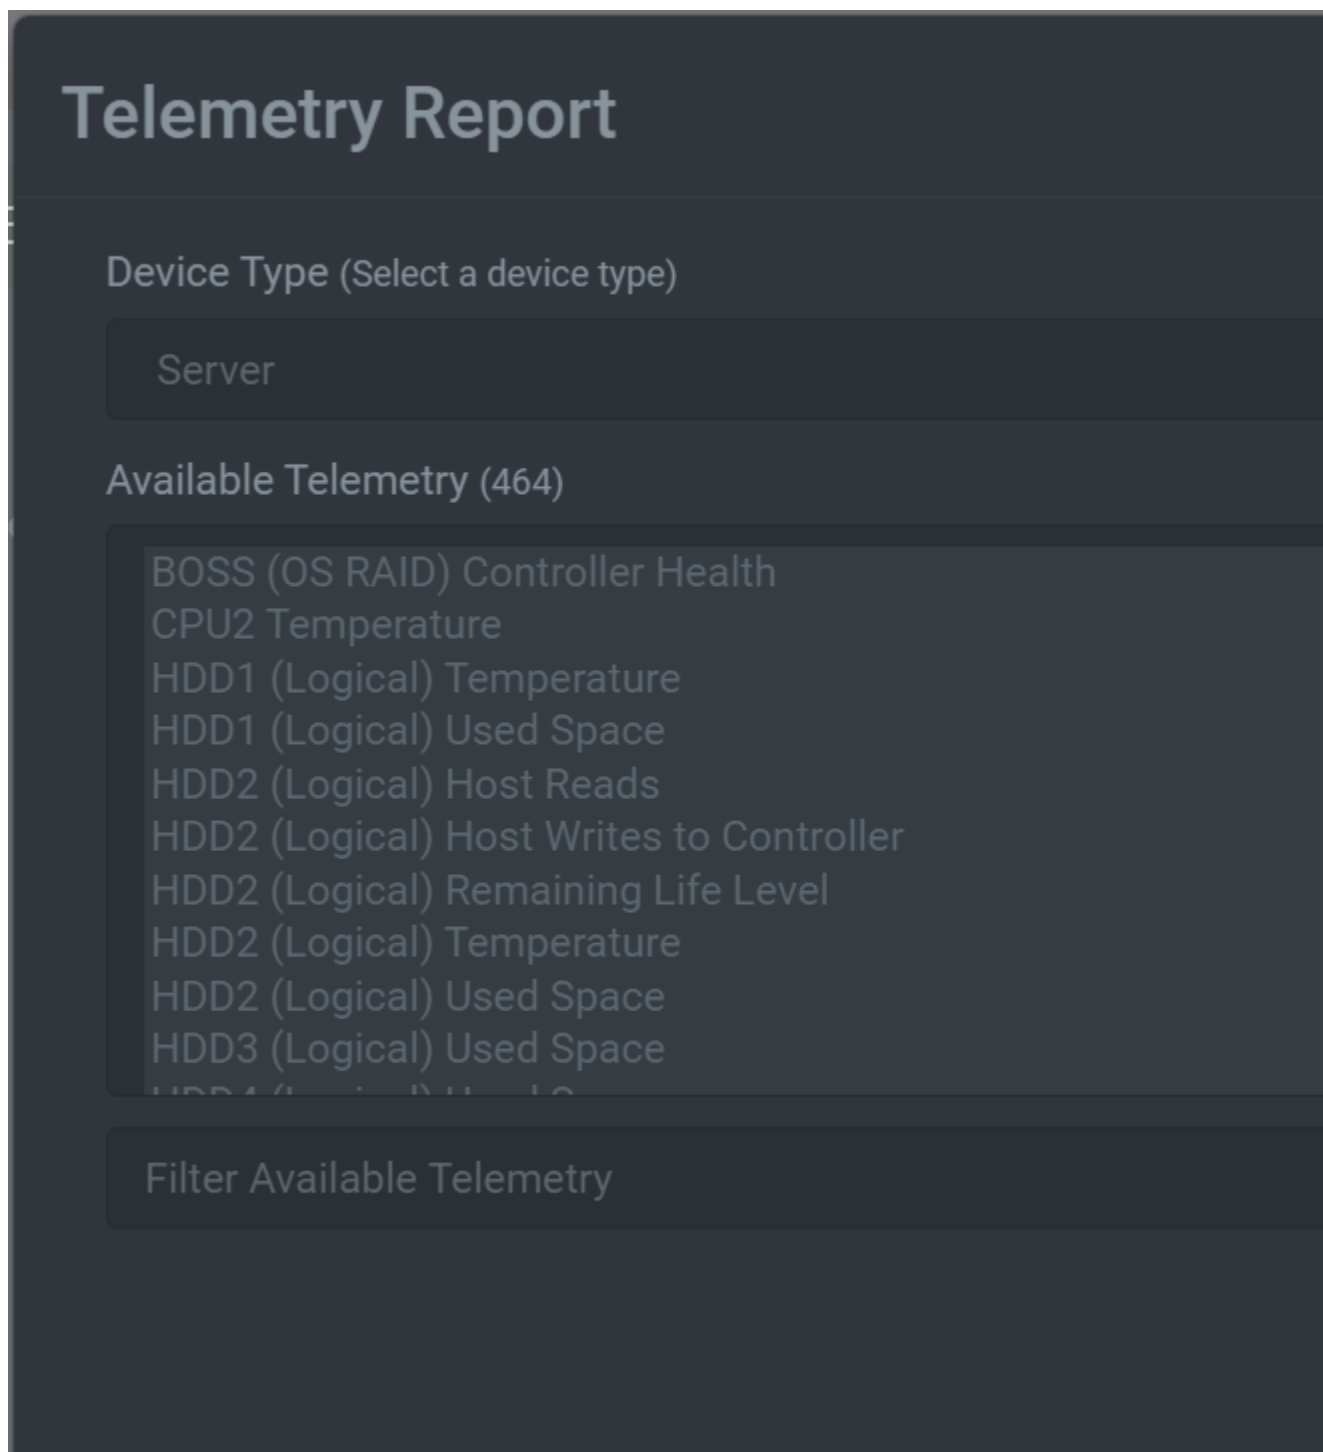

- Latest device telemetry report is now available for use:
 - You can access this by going to the Reporting page.
 - Click on the "Telemetry" link in the list.

SETTINGS / REPORTS

Telemetry

Provides a list of devices' latest telemetry value information. Telemetry

- This will open a modal enabling you to choose 10 or less telemetry points that will be included in the report.

Once your desired settings are selected, click the "CSV" button. This will generate the report as a comma separated file.

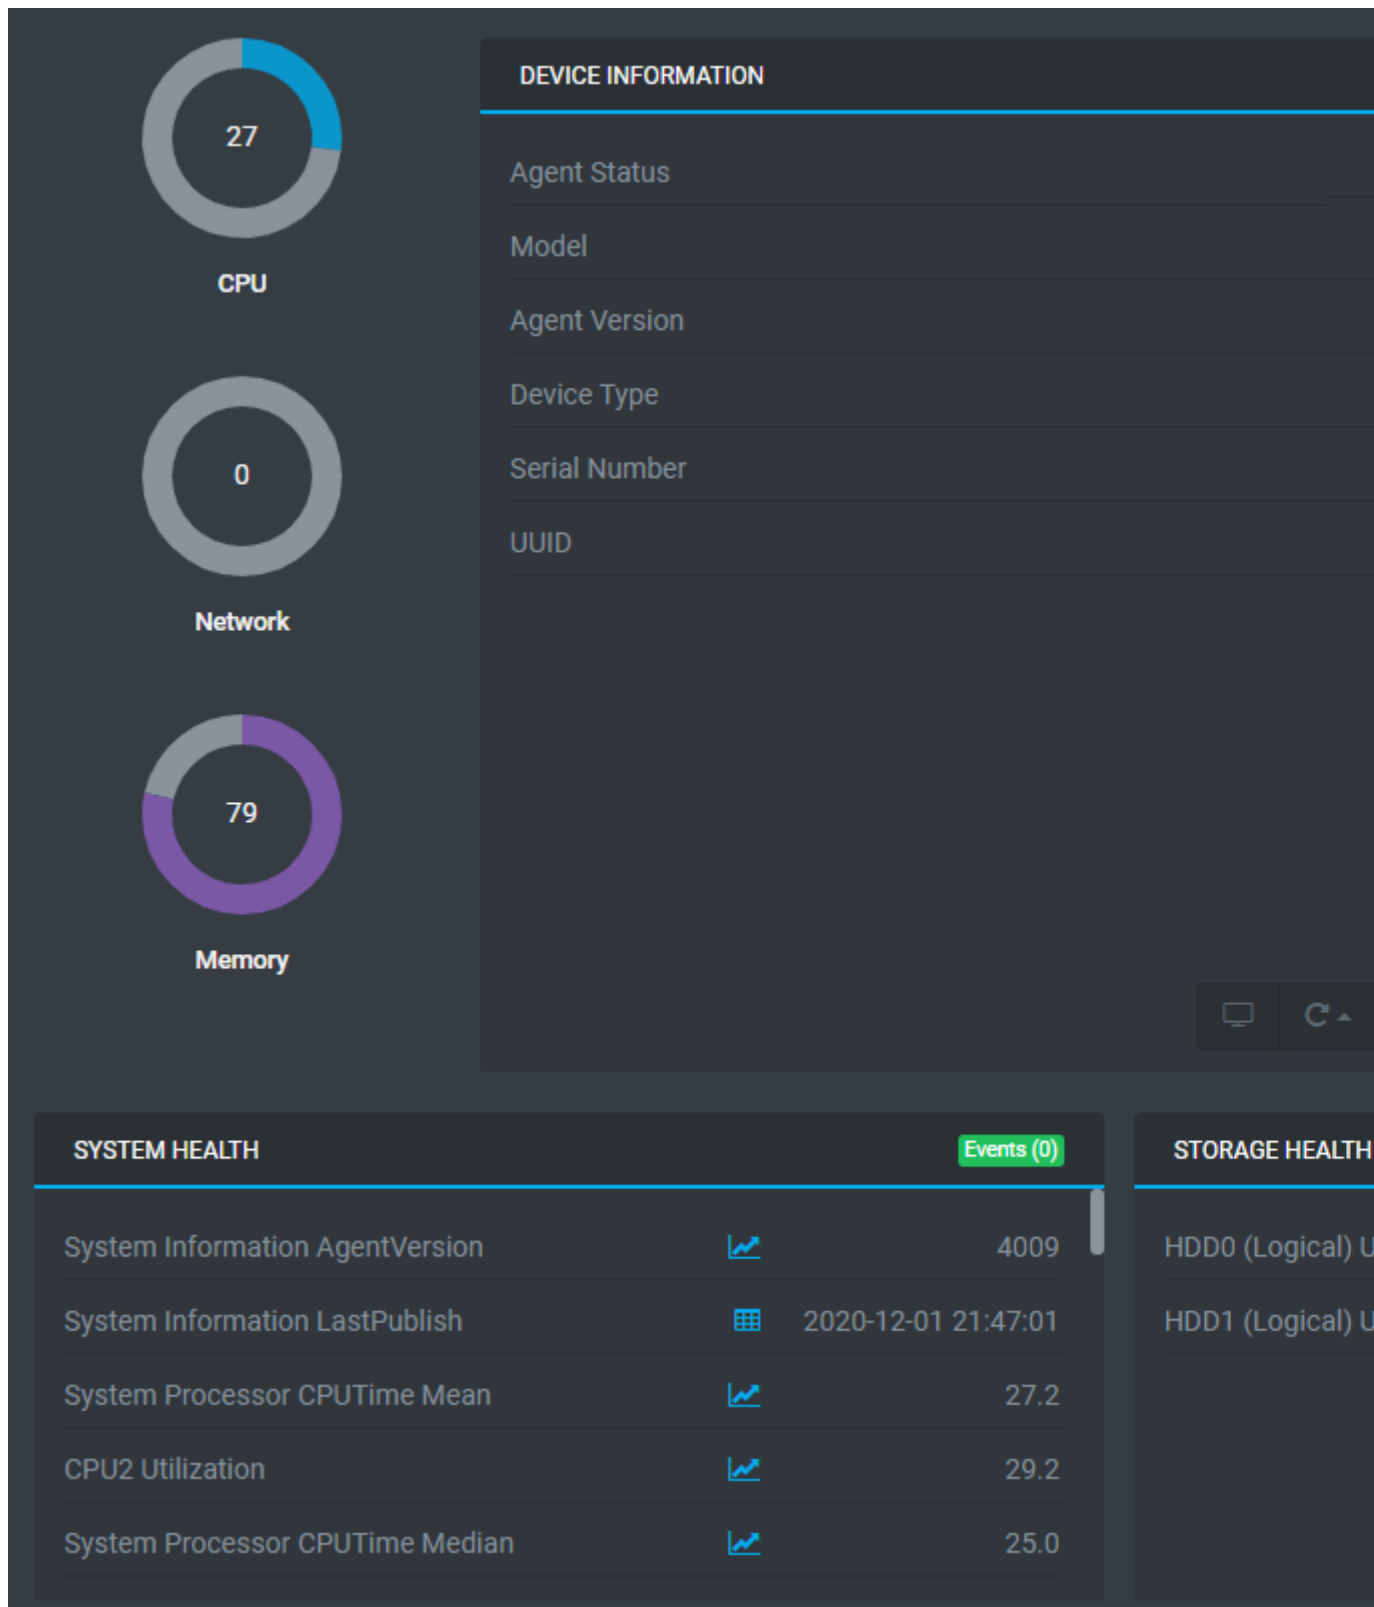

Bug Fixes

- Sizing fix for the "Add Customer" modal when assigning a new gateway.
- All remote command buttons on dashboards are now hidden for end user roles. Power users can still access them.
- Copy/paste dashboard URLs are now working correctly.

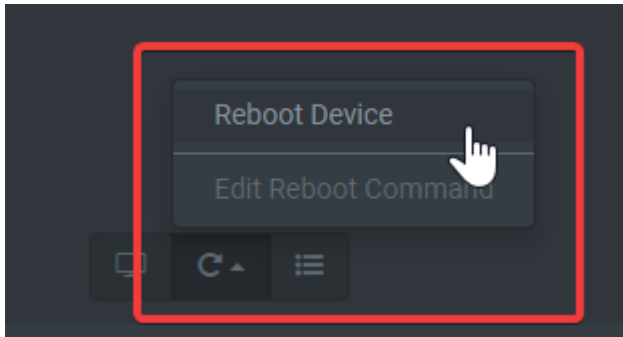

Release 16.0: December 1st, 2020

Enhancements

- New user experience for Server and Media Player Dashboards

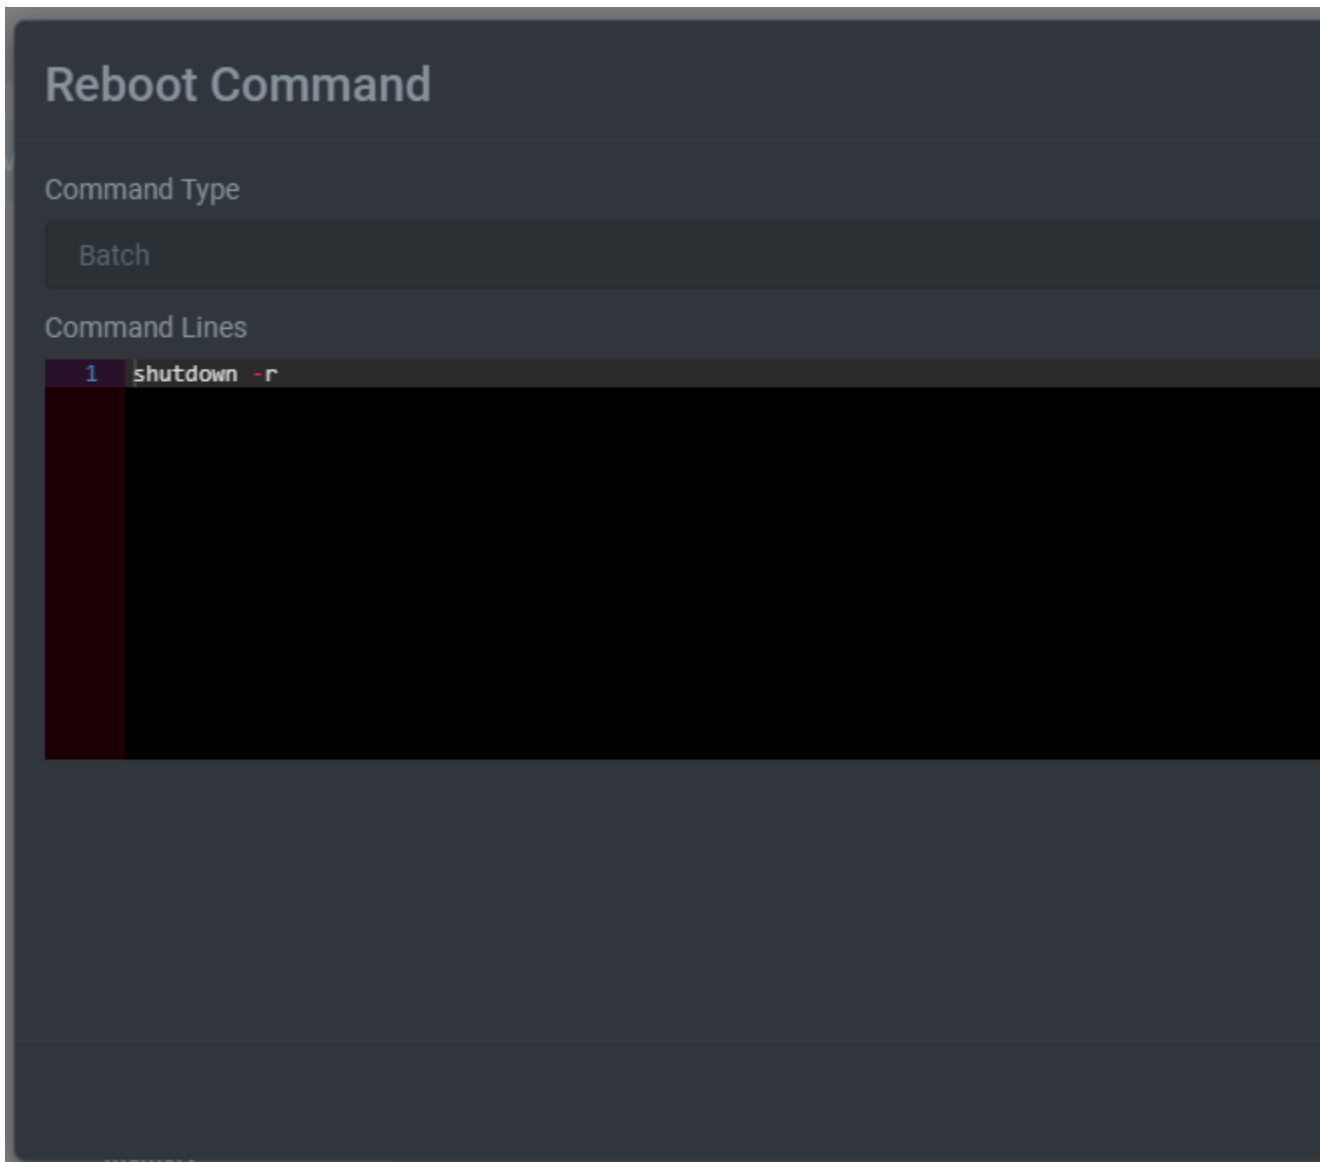

- Customizable dashboard reboot button
 - Users may now customize which command is run upon clicking the reboot button on the dashboards.

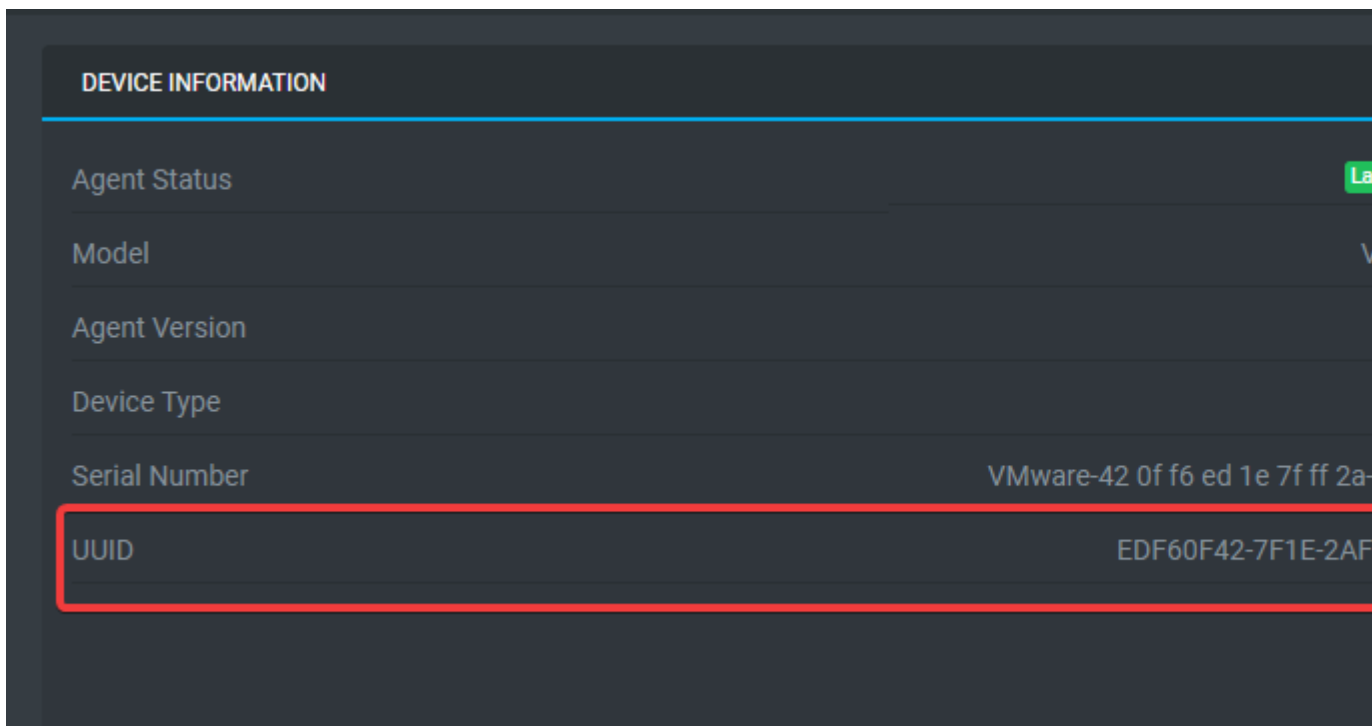

How to edit your command:

- a. Go to your desired dashboard via the side menu
- b. Click on the reboot button on the information panel.
- c. If the menu is plain text, then the admin has not created a default template for you to use yet. If the menu is c

- Added UUID to the device information panels

Bug Fixes - Fix for defining OR criteria on remote command query definitions. - You may now define two or more

Release 15.0: October 15th, 2020

Enhancements

The side menu now features enhanced pagination controls to ensure fast loading of your dashboards. The

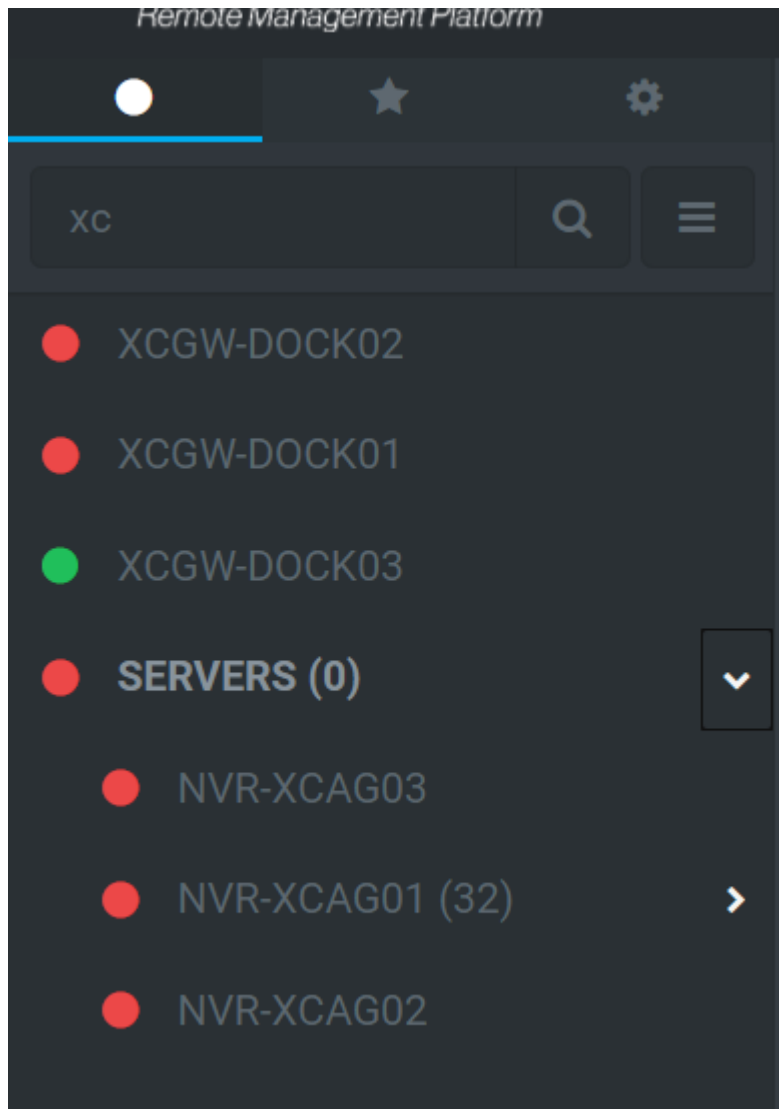

Choose an item from the "Items Per Page" dropdown and the side menu will only show that # of items per page

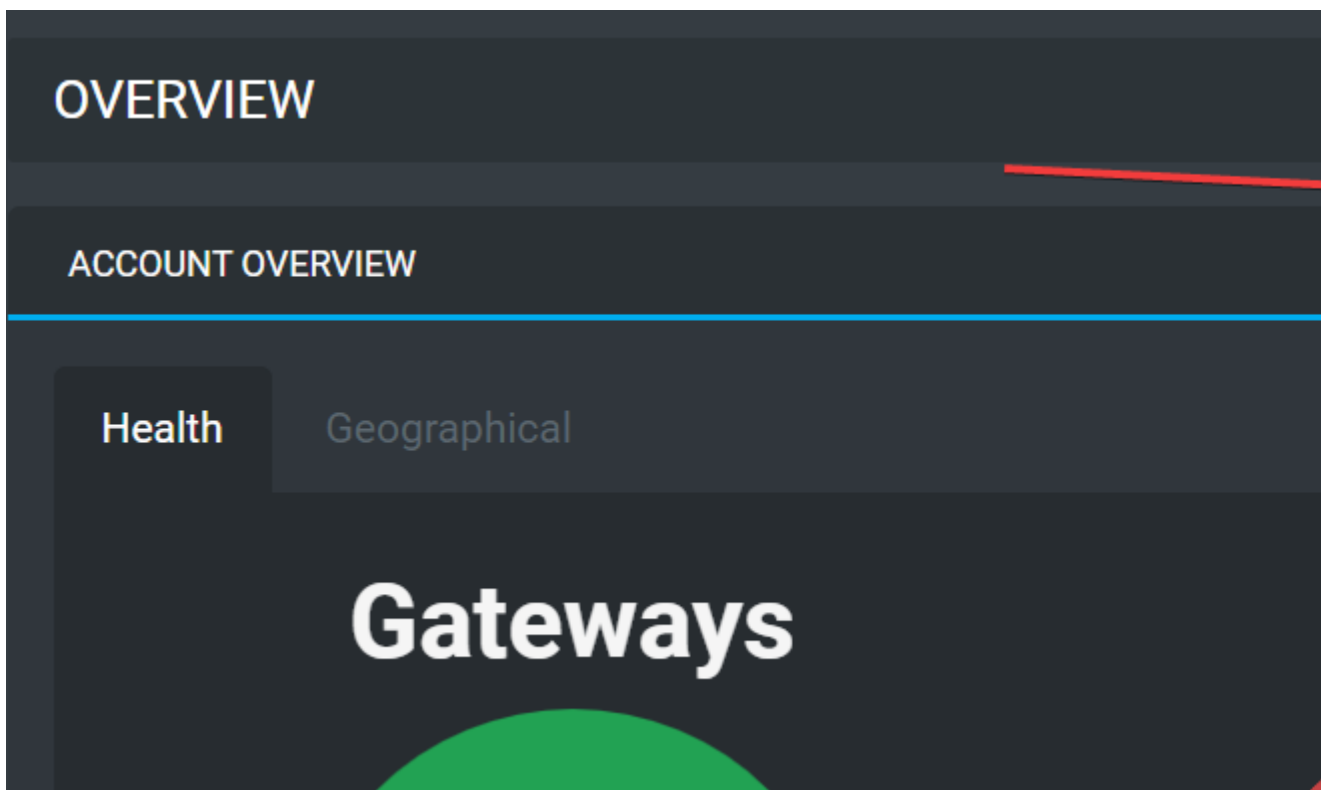

• Global Search

- We are now supporting global search! You can leverage the side bar search textbox to search across all asse

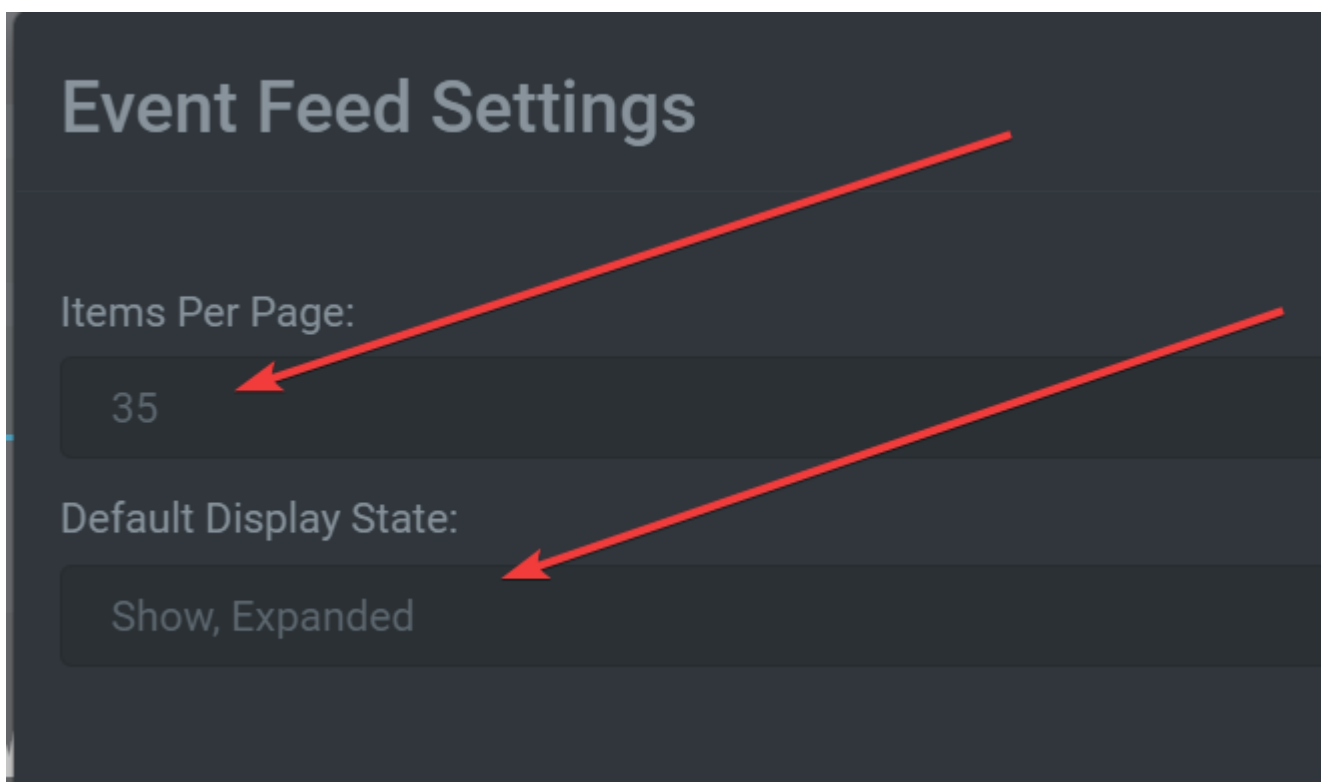

- Customizable Event Feed

- You can now customize how many events you want displayed on all event feed panels:

Clicking the gear icon will open a modal enabling you to define how many items you would like displayed on each page.

Bug Fixes

- Name of the device is now driven by the hostname sent via the agent.

- Clicking on the bookmark tab preserves your current location on the site.

Release 14.0: September 7th, 2020

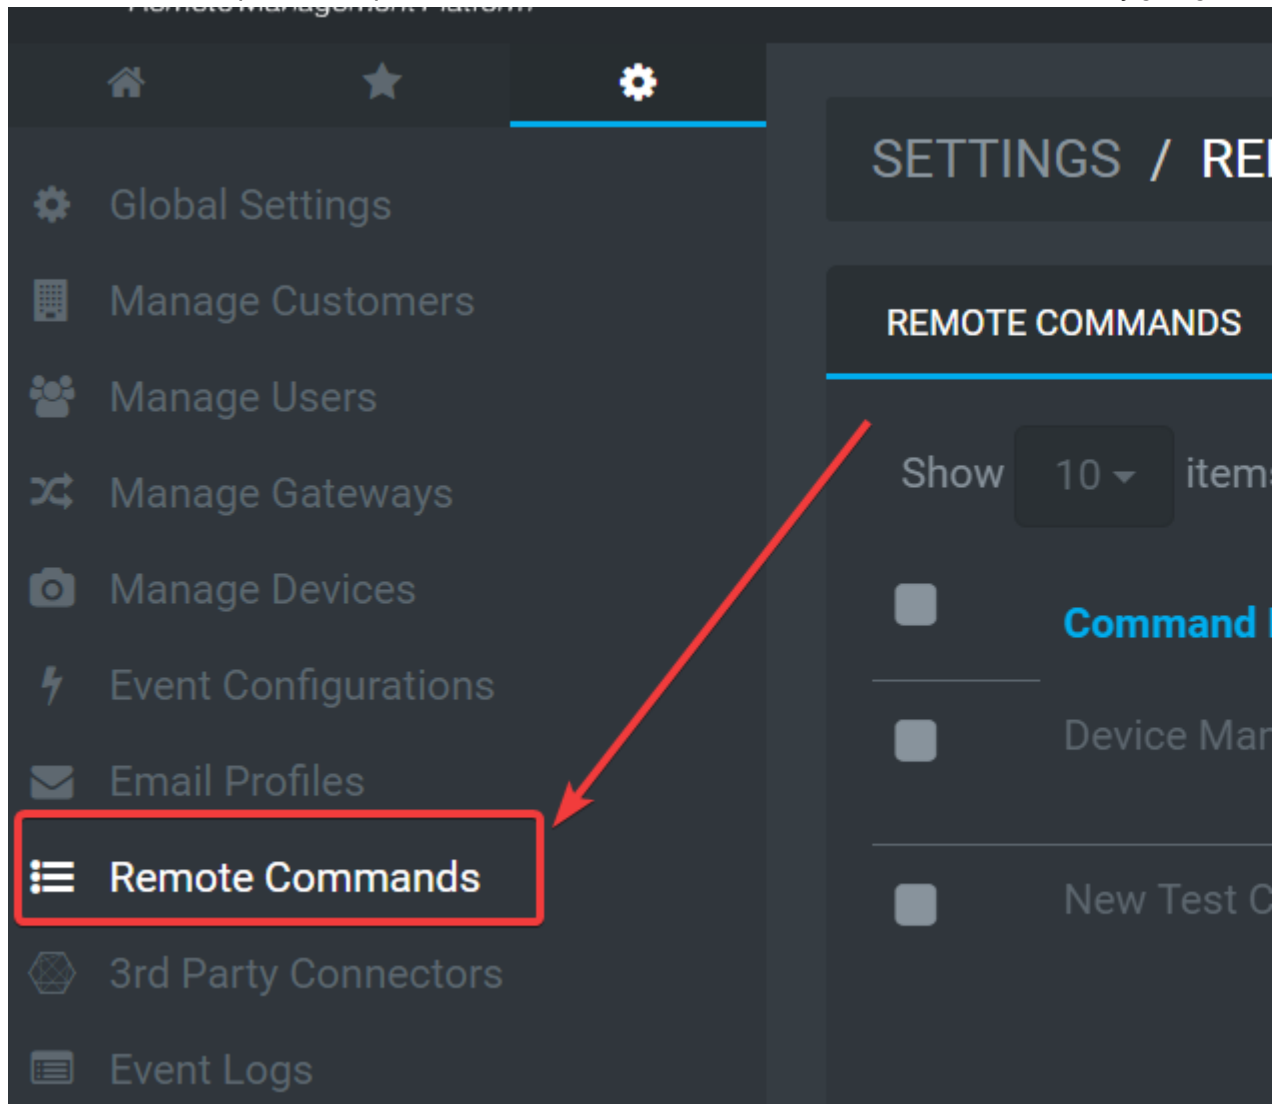

Enhancements

- Remote Command Execution Status Support
-

We've added the ability to see the current status of a remote command execution on the device dashboard.

Remote Command History

- There is now a complete list of previous executions for a remote command. You can see this by going to Settings / Remote Commands

Backend Process Improvements

- We've implemented several performance improvements on our backend design to ensure the best user experience.

Bug Fixes

- Unlocking a user from Manage Users will now clear out prior bad log in attempts.
- Remote Commands will now fire automatically if assigned to an event.

Release 13.1: July 16th, 2020

Enhancements

- Alert Summary E-mail Support
- We've added the ability to group your e-mail alerts together within a standard summary e-mail template.

How to Enable: - Log in using your credentials *note: You must be a power user in order to access this functionality -

Release 13: June 23rd, 2020

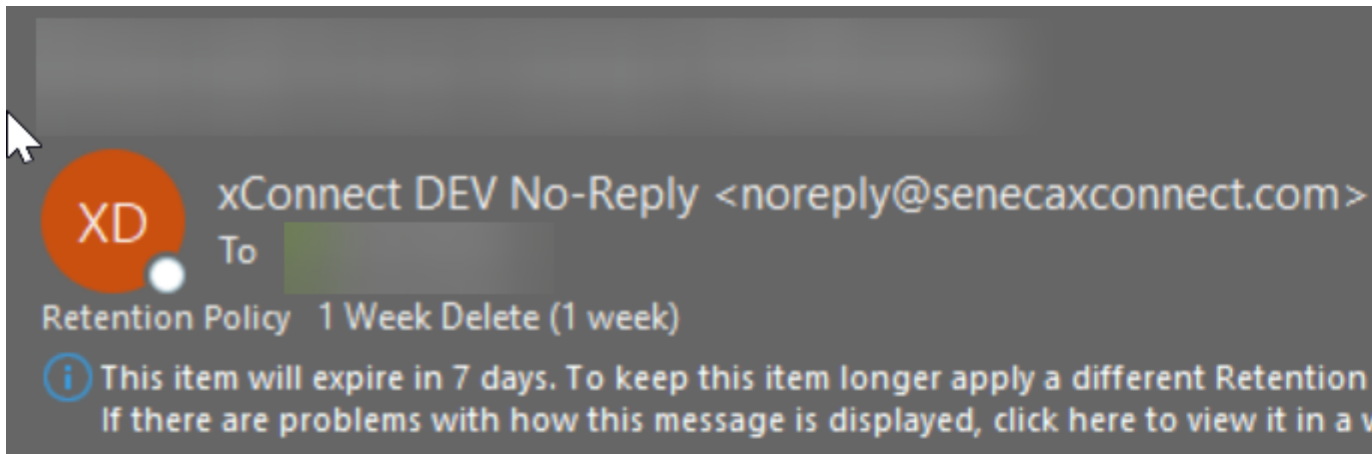

Enhancements

- Event Feed alterations to the navigation links.
- Modified the way the event feed links navigate a user to the appropriate device dashboard and event log listing.

Upon clicking the device name (i.e. Server01) a user will be taken to the device dashboard. Clicking the table icon (

- Company Abbreviation added to all alerting e-mails
- Enables xConnect support to easily identify which e-mail alerts originated from a particular xConnect customer.

CAUTION: This email originated from outside of the organization. This message may contain confidential information. If you are not the intended recipient, please do not open, copy, or distribute this message.

The following criteria was met: Network_NIC1_MaxLinkSpeed > 20

Device information:

UID: 4C4C4544-0059-5010-8048-C2C04F584D32

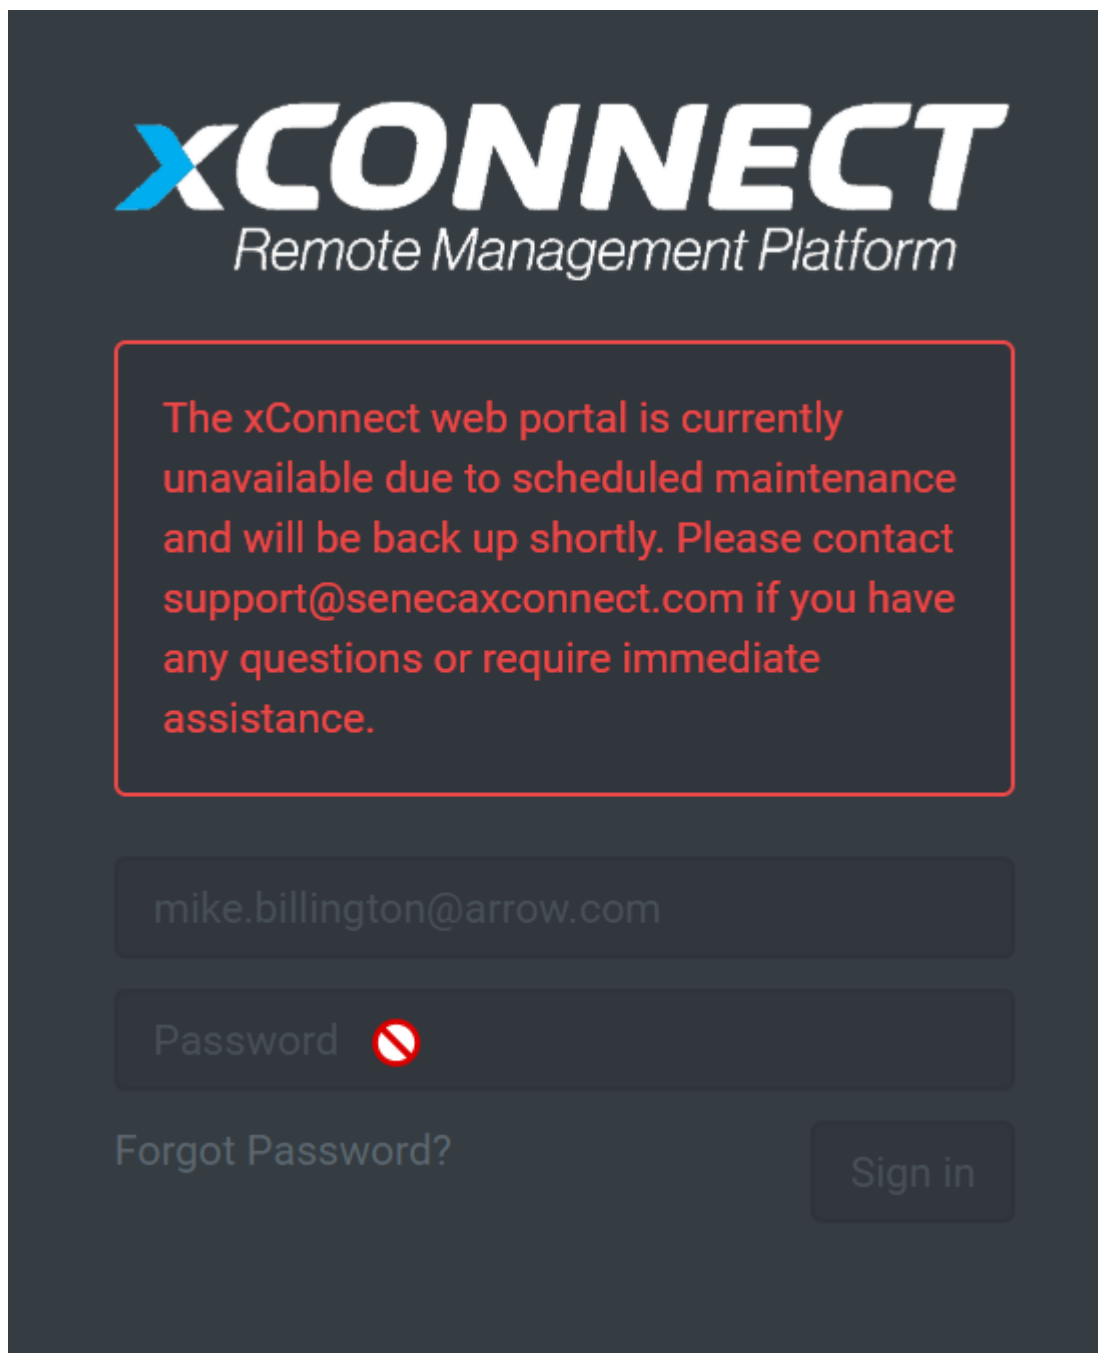

Event information:

Timestamp: 2020-05-15T15:46:07.026Z

Network_NIC1_MaxLinkSpeed: 500

Company Code: ABC

- Release version # added to the home page, which links to release notes.
- Maintenance mode: prevents potential spamming of alerts in the occurrence of a scheduled maintenance window.

- User preferences now preserves your selections for expanding or collapsing panels on your dashboards.

Bug Fixes

- Event logs now include custom outage duration notices instead of default 60 minute outage windows.
