## Release 2021.02.0: February 6<sup>th</sup>, 2021

### Enhancements

- Virtual Gateway Onboarding Wizard

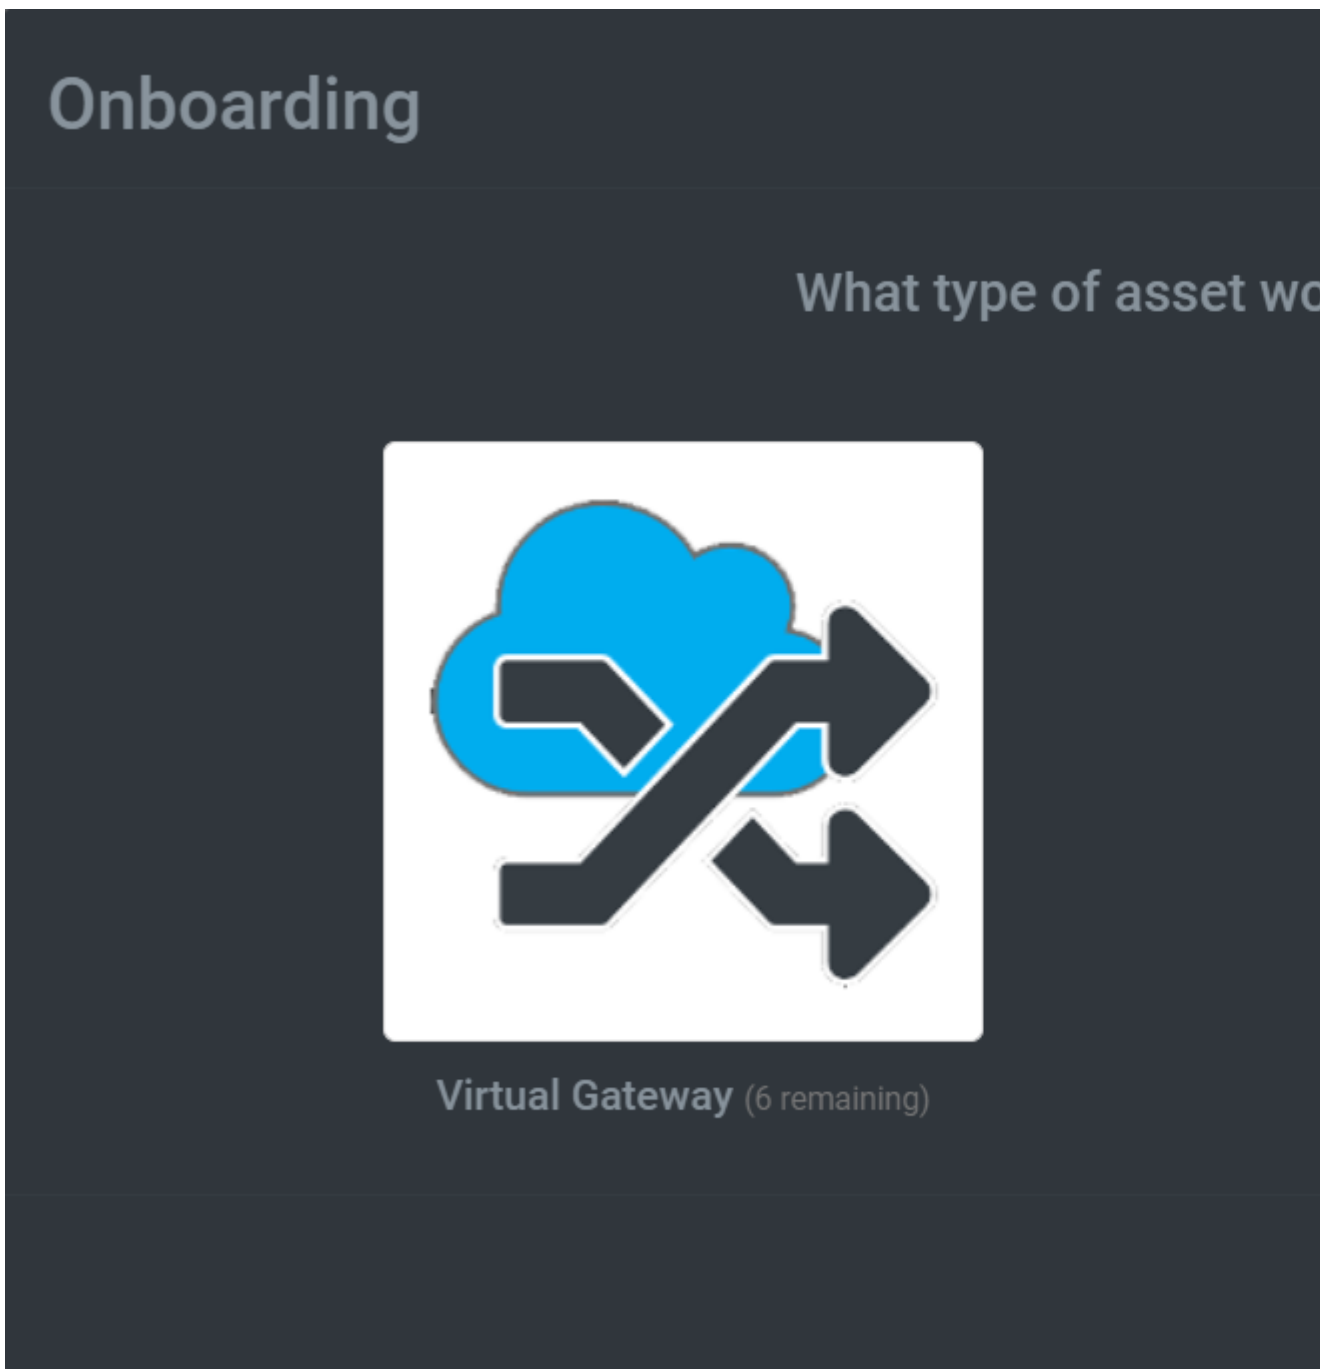

We have added the ability to create virtual gateways within your xConnect instance! Customers with the cloud gateway

- Upon logging in to a **new** account with no gateways or devices, the onboarding wizard will automatically appear

- At any time, you can open the onboarding wizard by clicking the icon in the header:

- The initial step of the onboarding wizard will enable you to begin onboarding a new Virtual Gateway or will ta

The Virtual Gateway option will be enabled if you have 1 or more available licenses to your account. These licens

- Clicking the Virtual Gateway icon will take you to step 2 of the wizard, you must enter a unique name for your

BLT-DESKTOP	12/17/2020 03:45:41 PM	Succeeded
BLT-DESKTOP	12/17/2020 03:44:55 PM	Succeeded

- Reporting is now available for all power users and can be accessed by the settings menu:

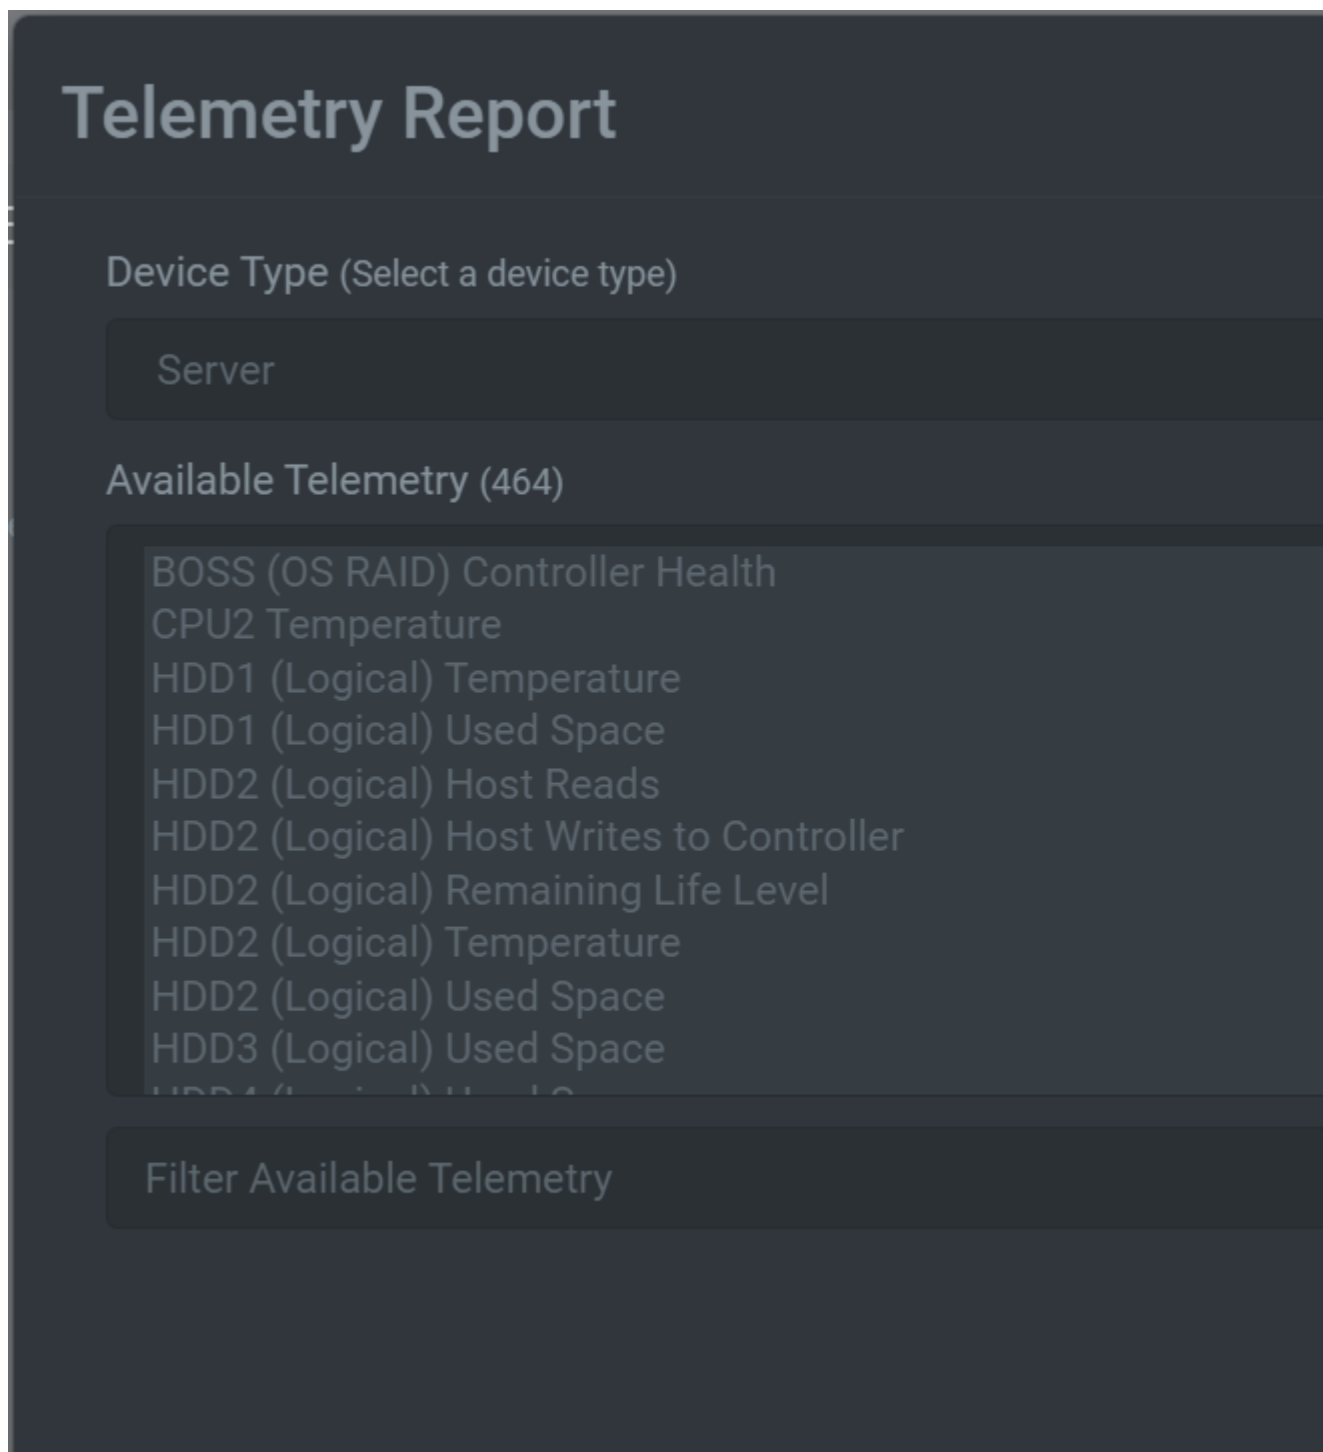

- Latest device telemetry report is now available for use:
  - You can access this by going to the Reporting page.
  - Click on the "Telemetry" link in the list.

## SETTINGS / REPORTS

### Telemetry

Provides a list of devices' latest telemetry value information. Telemetry

- This will open a modal enabling you to choose 10 or less telemetry points that will be included in the report.

Once your desired settings are selected, click the "CSV" button. This will generate the report as a comma separated file.

## Bug Fixes

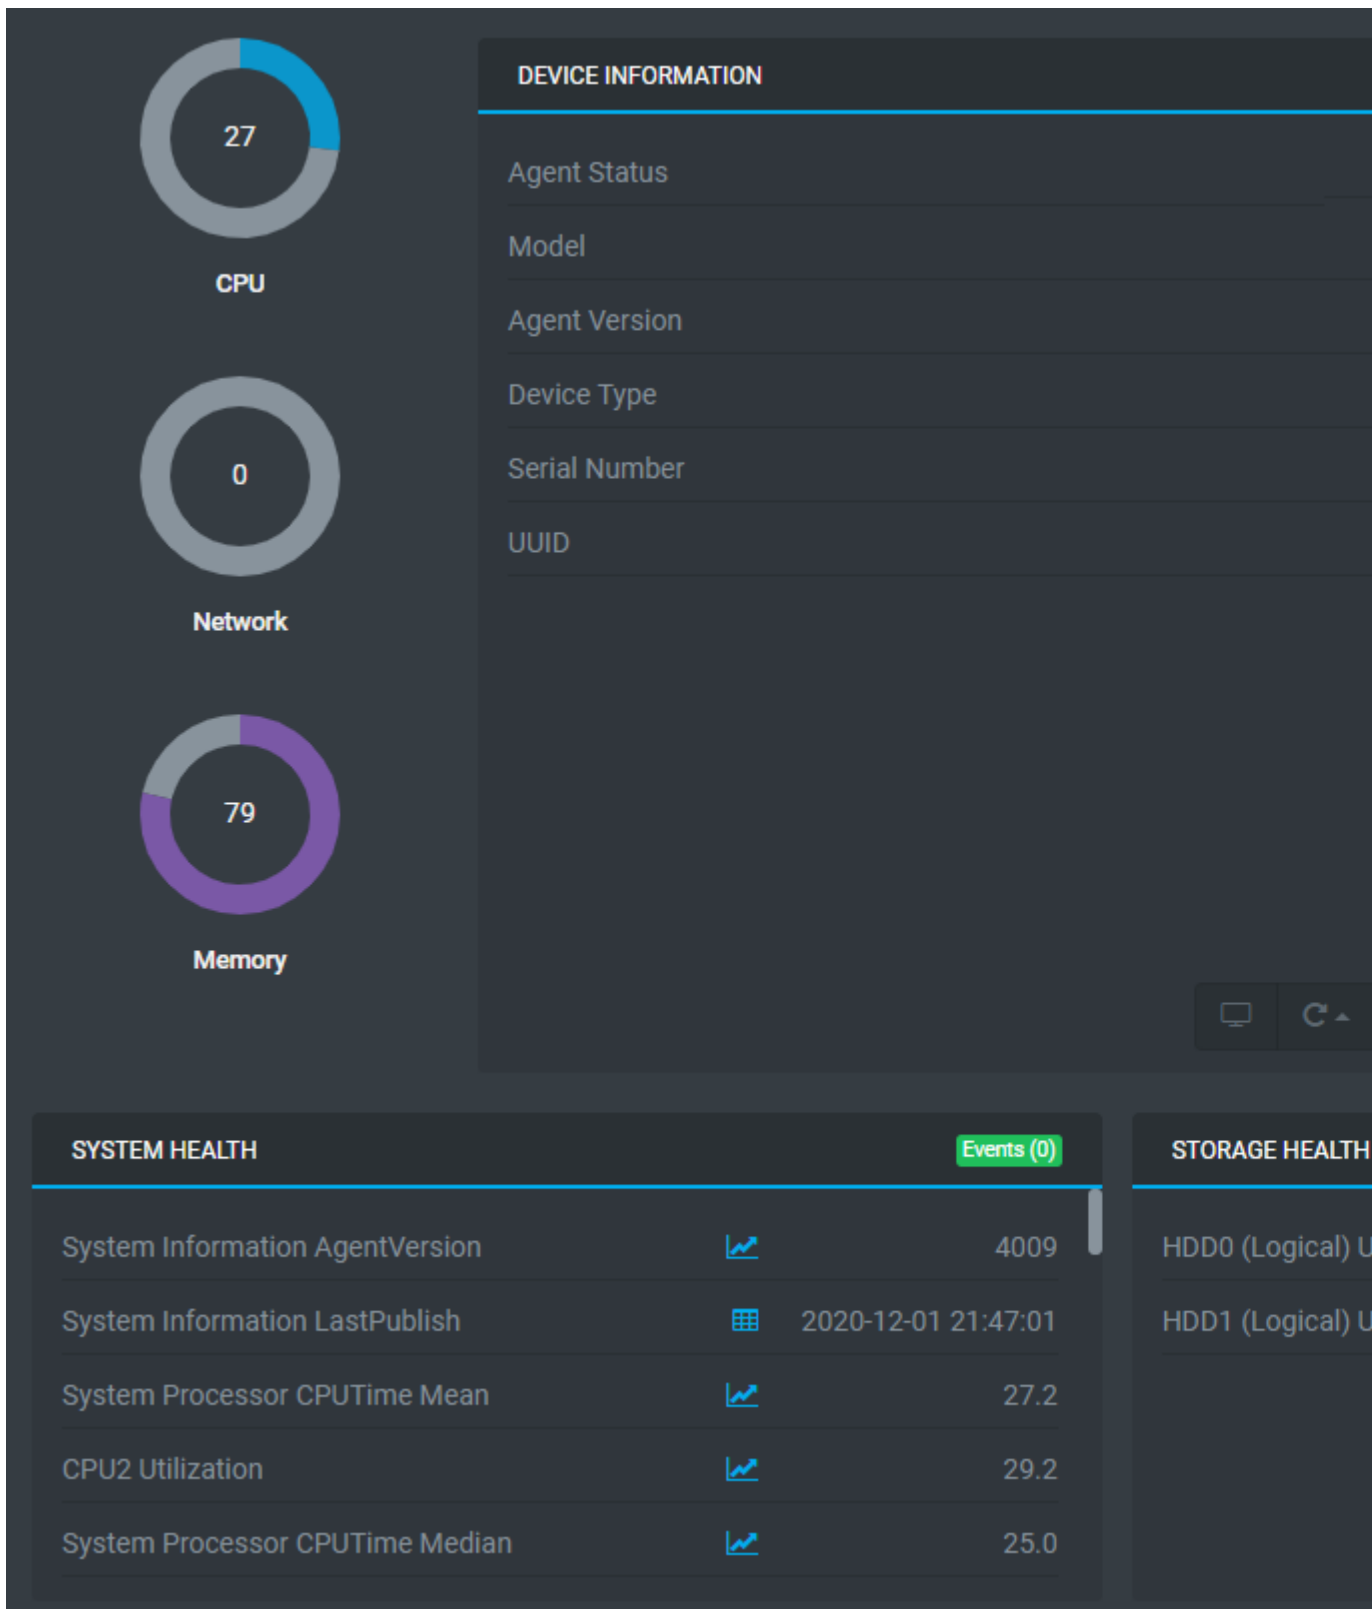

- Sizing fix for the "Add Customer" modal when assigning a new gateway.
- All remote command buttons on dashboards are now hidden for end user roles. Power users can still access them.
- Copy/paste dashboard URLs are now working correctly.

## Release 16.0: December 1<sup>st</sup>, 2020

### Enhancements

- New user experience for Server and Media Player Dashboards

- Customizable dashboard reboot button
  - Users may now customize which command is run upon clicking the reboot button on the dashboards.

How to edit your command:

- a. Go to your desired dashboard via the side menu
- b. Click on the reboot button on the information panel.
- c. If the menu is plain text, then the admin has not created a default template for you to use yet. If the menu is c

- Added UUID to the device information panels

## Bug Fixes - Fix for defining OR criteria on remote command query definitions. - You may now define two or more

## Release 15.0: October 15<sup>th</sup>, 2020

### Enhancements

- Enhanced Device Selection with Query Builder
  - The Remote Command and Custom Event Configuration forms have been modified to support dynamic de

- Side Menu Paging

•

The side menu now features enhanced pagination controls to ensure fast loading of your dashboards. The

Choose an item from the "Items Per Page" dropdown and the side menu will only show that # of items per page

• Global Search

- We are now supporting global search! You can leverage the side bar search textbox to search across all assets

- Customizable Event Feed

- You can now customize how many events you want displayed on all event feed panels:

Clicking the gear icon will open a modal enabling you to define how many items you would like displayed on each page.

## Bug Fixes

- Name of the device is now driven by the hostname sent via the agent.

- Clicking on the bookmark tab preserves your current location on the site.

## Release 14.0: September 7<sup>th</sup>, 2020

### Enhancements

- Remote Command Execution Status Support
  -

We've added the ability to see the current status of a remote command execution on the device dashboard.

## Remote Command History

- There is now a complete list of previous executions for a remote command. You can see this by going to Settings / Remote Commands

## Backend Process Improvements

- We've implemented several performance improvements on our backend design to ensure the best user experience.

## Bug Fixes

- Unlocking a user from Manage Users will now clear out prior bad log in attempts.
- Remote Commands will now fire automatically if assigned to an event.

## Release 13.1: July 16<sup>th</sup>, 2020

### Enhancements

- Alert Summary E-mail Support
- We've added the ability to group your e-mail alerts together within a standard summary e-mail template.

**How to Enable:** - Log in using your credentials \*note: You must be a power user in order to access this functionality -

### Bug Fixes

- Newly added devices will now automatically be applied with e-mail alerts, remote commands, or third party conn

## Release 13: June 23<sup>rd</sup>, 2020

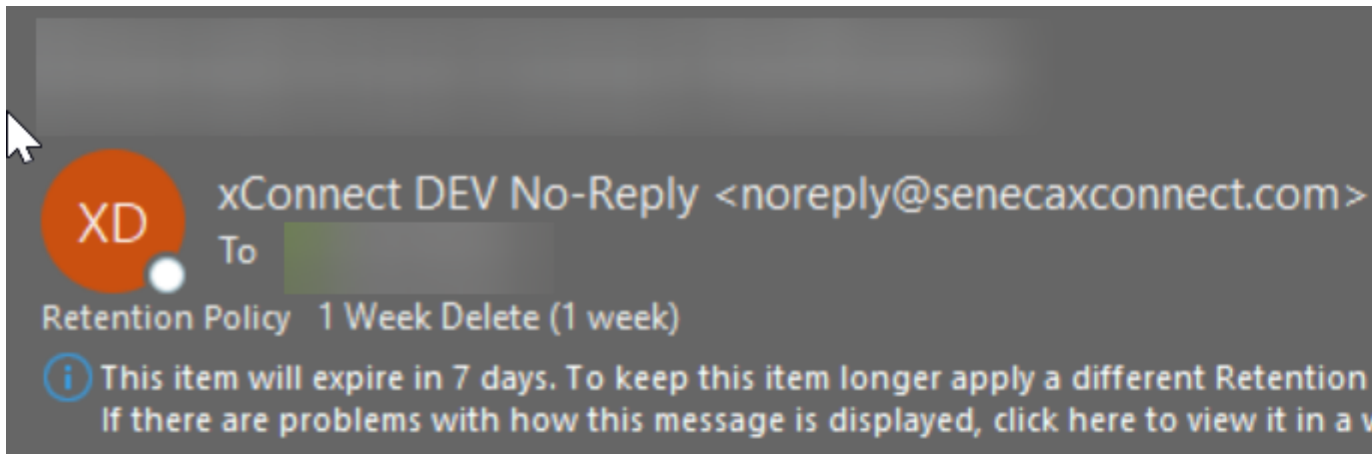

### Enhancements

- Event Feed alterations to the navigation links.
- Modified the way the event feed links navigate a user to the appropriate device dashboard and event log listing.

Upon clicking the device name (i.e. Server01) a user will be taken to the device dashboard. Clicking the table icon (

- Company Abbreviation added to all alerting e-mails
- Enables xConnect support to easily identify which e-mail alerts originated from a particular xConnect customer.

**CAUTION:** This email originated from outside of the organization. This message may contain confidential information. If you are not the intended recipient, please do not open, copy, or distribute this message.

The following criteria was met: Network\_NIC1\_MaxLinkSpeed > 20

Device information:

UID: 4C4C4544-0059-5010-8048-C2C04F584D32

Event information:

Timestamp: 2020-05-15T15:46:07.026Z

Network\_NIC1\_MaxLinkSpeed: 500

Company Code: ABC

- Release version # added to the home page, which links to release notes.
- Maintenance mode: prevents potential spamming of alerts in the occurrence of a scheduled maintenance window.

- User preferences now preserves your selections for expanding or collapsing panels on your dashboards.

## Bug Fixes

- Event logs now include custom outage duration notices instead of default 60 minute outage windows.
