

## Manage Devices

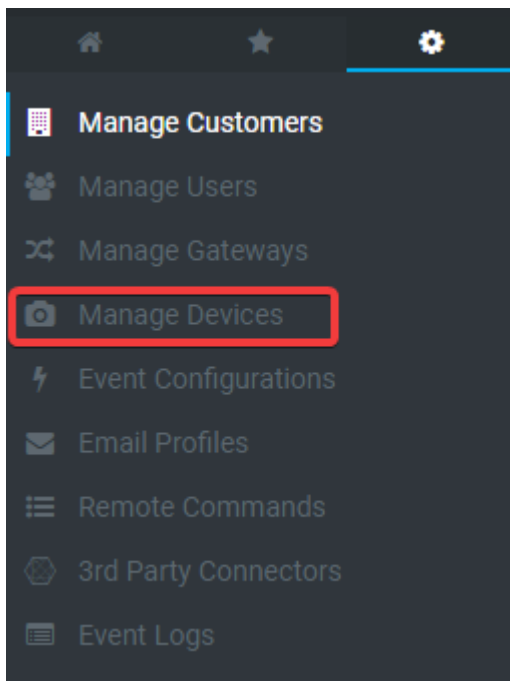

The device management page allows you to modify, disable, or remove any IP Device, Camera or generic device that has been added to the system. You can also remove a server or gateway from this interface.

### Accessing Device Management

1. Log in as a power user
2. Click on the settings tab on the left-side menu

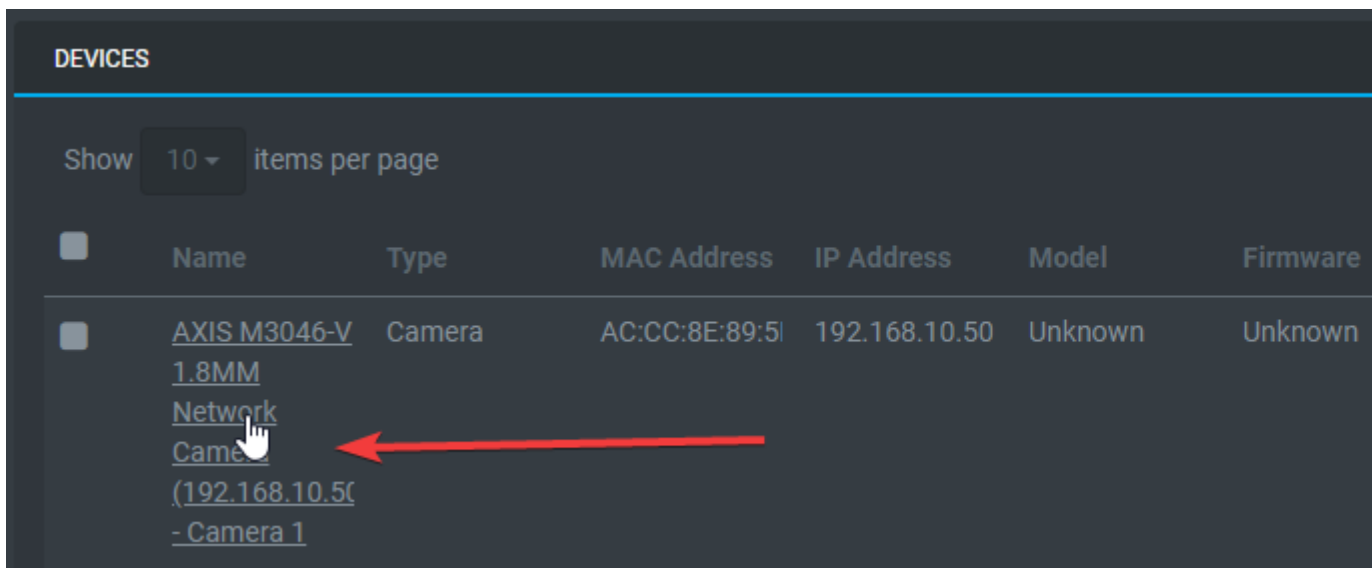

3. Click on the "Manage Devices" menu item

## Updating a Device Name

In order to update a device name, click on the name of the device via the grid on the Manage Devices page:

Once you have clicked the name, a modal will appear enabling you to enter a different name for the device. This will also update the logs.

Edit Device

Name

AXIS M3046-V 1.8MM Network Camera (192.168.10.50) - Camera 1

Save

Cancel

## Exporting list of devices

You can export your complete list of devices to CSV by clicking the export button

DEVICES

Show 10 items per page

Search

	Name	Type	MAC Address	IP Address	Model	Firmware	Server
<input type="checkbox"/>	AXIS M3046-V 1.8MM Network Camera	Camera	AC:CC:8E:8	192.168.10	Unknown	Unknown	NVR-D123456

## Removing, Enabling or Disabling Devices

You can remove, disable or re-enable a disabled device by using the checkboxes on the left side of the grid and the

**Removing** a device will cause the device and associated telemetry to be removed from the system.

**Disabling** a device will remove the device from the left-side menu and you will no longer receive alerts for that device.

**Enabling** a device will make it appear on the side menu again. NOTE: You will have to set up any custom events/alerts for that device.
